3+ years in enterprise delivery

7 enterprise projects across banking and insurance

2 core domains: Banking and Insurance

2 core languages: Java · TypeScript

Summary

Senior Java Full Stack Developer at Coforge Ltd. working for Santander Bank UK. I build **Java and Spring Boot services**, production microservices, and enterprise interfaces with **React and Angular**. Comfortable across monoliths and microservices, I focus on REST APIs, service orchestration, reusable UI foundations, performance, and mentoring while delivering software for banking, insurance, and internal enterprise platforms.

Career Arc

Oct 2023 Started full-time enterprise delivery

Began with banking migration and backend enhancement using Java and Spring Boot, alongside modern frontend applications.

2024 Expanded backend and frontend ownership

Moved into insurance backend ownership and frontend modernization, balancing Java service orchestration with reusable Angular components and state management.

2026 Owning backend delivery for Santander investments

Built two Spring services that update investment data at FNZ, then supported testing, monitoring, fixes, and rollout while continuing internal full-stack work.

Selected Projects

Santander UK Investment Services

SENIOR JAVA BACKEND DEVELOPER

April 2026 - Present · Investments · Create Target Support and NINO Update

ROLE Owned two Spring Framework 4 services that update investment data at Santander UK's FNZ endpoint.

ACTIONS Built the Create Target Support and NINO Update flows, including outbound client calls, data validation, and request/response mapping. Worked with QA on regression and performance testing, then handled monitoring, bug fixes, framework version upgrades, and certificate upgrades.

IMPACT Deployed to pre-production in early September 2026; continue to support test findings and rollout stabilization.

Edge AVA Insurance Platform

SENIOR JAVA DEVELOPER

December 2024 - April 2026 · Insurance / Santander Bank UK

ROLE Backend owner for the Service Data Management microservice and service orchestration on a production insurance platform through April 2026.

ACTIONS Designed orchestration across enterprise services using Java 17, Spring Boot, WebClient, and Resilience4j; built fault-tolerant REST APIs; implemented retry and circuit breaker behavior for secure integrations.

IMPACT Delivered backend service and integration work for the insurance platform through project completion in April 2026.

Patching & Vulnerability Management Platform

FULL STACK DEVELOPER · ANGULAR

Delivered to Santander in August 2025 · Ongoing development and maintenance

ROLE Contribute mainly to Angular feature development, with targeted backend work on the delivered tool.

ACTIONS Develop new Angular pages and features, review pull requests, and add or maintain backend CRUD endpoints using a layered Spring Data JPA and PostgreSQL design. Support authentication, RBAC, and Observer-pattern updates.

IMPACT Continue feature additions and maintenance after the Santander delivery in August 2025.

Additional Project Work

Lead React development for the **Resource Fulfillment Management Tool**. Build its TypeScript interface with shadcn/ui and Tailwind CSS, using TanStack Query, TanStack Router, TanStack Table, and Zustand. The work also covers a PostgreSQL-backed monolith, schema design, CRUD APIs, RBAC, and Observer-based updates. Continue contributing to **Santander UK Investment Services** development. Earlier work includes Java and Spring Boot, banking migration, security dashboards, and enterprise frontend delivery. Joined the initial team for Sanforge Phase 1 and continue contributing to Phase 2 through PR reviews and occasional fixes.

Resource Fulfillment Management Tool | Sanforge Phase 1 · Initial Team | Sanforge Phase 2 | Financial Services Migration

Core Skills

BACKEND	Java 8 / 11 / 17, Spring Framework 4, Spring Boot, Spring MVC, Spring Data JPA, PostgreSQL, relational schema design, CRUD APIs, data validation, object mapping, HTTP client integrations, Spring Profiles, Spring Actuator, Hibernate, JDBC, REST APIs, GraphQL, Resilience4j, microservices.
FRONTEND	React, TypeScript, Shadcn UI, TanStack Query, TanStack Router, TanStack Table, Zustand, Zod, Angular, Angular Material, NgRx, SCSS, JavaScript.
ARCHITECTURE	Monoliths, microservices, Saga pattern, event-based choreography, Strategy and Observer patterns, backend orchestration, component-based architecture, state management, lazy loading, API integration, responsive UI design, fault tolerance, retry strategies, circuit breakers.
QUALITY / SECURITY	JUnit, integration testing, Postman, Bruno, Swagger, JMeter, Dynatrace monitoring, Kibana log analysis, Spring Security, JWT, authentication, role-based access control, secure REST API practices, TOTP, 2FA, Azure SSO.
DELIVERY	Docker, Docker Compose, Kubernetes, OpenShift, Jenkins, Maven, Git, GitHub, GitHub Actions, GitLab, CI/CD, AWS basics, Agile collaboration, PR reviews, mentoring junior developers.

Education

Bachelor of Technology, Information Technology
